SERVICES

You've got the talent, computers, Internet access, and work to do—business to run.

You probably don't have the desire to burn time, waste money, hire computer experts, buy software and hardware, waste more time and money, secure, backup, and continually upgrade software and hardware, clean up viruses, and spyware, waste more time and money, etc., etc.

We get IT. We know IT. We've got IT.

CyberlinkASP is an Application Service Provider. It's in our name and it's in our genes. We're experienced computer geeks—more like über-geeks—and we host, manage, upgrade and serve up the industry's best software. It's simple. It's secure. It's cost effective. It's outsourced IT done right and it's available from anywhere with a computer and Internet access.

Connect, log in, work ... relax.
